

A PROACTIVE STEP TO REDUCE WILDFIRE RISK

A prescribed burn is a carefully planned and closely monitored fire used to safely remove dry grass, brush, and other fuels from an area. It helps reduce the risk and severity of future wildfires while supporting healthier, more resilient forests.

This fuel modification project will help protect the Village of Warfield's community by increasing its resilience to wildfire and improving the usability of the space.

The prescribed burn will help create safer conditions for future wildfire suppression by reducing available fuel and providing firefighters with more room to work safely and effectively. It will also provide valuable hands-on training opportunities for fire personnel and partner agencies.

WHEN WILL THIS TAKE PLACE?

Project planning and preparation are underway now with prescribed burning activities planned for fall 2026.

The exact timing will depend on weather and site conditions.

Once a burn date is confirmed, updates will be shared through BC Wildfire Service social media channels and posted on www.bcwildfire.ca
